CB-26P Fitting position

The fastest Fiesta ST 150 - 'ST' stands for Sports Technologies - uses a 2.0-litre 150bhp 16-valve four-cylinder to generate a top speed of 129mph and a sprint from 0-60mph in 7.9secs. Maximum torque is 140lb ft and is developed at a relatively high 4500rpm. There's a sweet-shifting, close-ratio five-speed manual gearbox as standard, along with a set of quite gnarly 17-inch alloy wheels.

"I've just fitted the device to my Fiesta ST and after much concern about killing my car was surprised how easy the fitting was.

I haven't seen any guides for this engine so thought you might like a few pics as finding the right hose to cut was a bit tricky. I have noticed an immediate difference in engine smoothness at low revs (all ST150s have this problem) and the car does seem more responsive so, so far so good! Thanks again and hope you find the pics of use for your fitting guide page." Steve.
