CB-26P Fitting position

Rover 416

One of the easiest to fit is the Rover 4 series and here is the Rover 416 GSi where the owner says he is getting more than 10% mpg improvement on a motorway run.

We know that the turbulence created in the induction gasses creates a better suspension of the petrol molecules and thus a cleaner more efficient burn.

It has certainly worked for this car which the owner says is noticeably more responsive as well as more fuel efficient.
